Information about Copyrighted Content

Some instruments administered for studies archived with ICPSR may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE

WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

Household Record-Type File

V2001: HOUSEHOLD RECORD TYPE

Source code: Record Type 2

Value	Label	Unweighted Frequency	%
2	Household record	255901	100.0 %
	Total	255,901	100%

Based upon 255,901 valid cases out of 255,901 total cases.

- Minimum: 2.00
- Maximum: 2.00

Location: 1-1 (width: 1; decimal: 0)

Variable Type: numeric

YEARQ: YEAR AND QUARTER OF INTERVIEW (YYYY.Q)

Source code: ICPSR_YEARQ

Notes: This year and quarter variable is formatted YYYY.Q where Q is 1, 2, 3 or 4. It allows for easier sorting and matching of data files.

Value	Label	Unweighted Frequency	%
2023.1	-	64102	25.0 %
2023.2	-	64339	25.1 %
2023.3	-	62799	24.5 %
2023.4	-	64661	25.3 %
	Total	255,901	100%

Based upon 255,901 valid cases out of 255,901 total cases.

- Mean: 2023.25
- Median: 2023.20
- Mode: 2023.40
- Minimum: 2023.10
- Maximum: 2023.40
- Standard Deviation: 0.11

Location: 2-7 (width: 6; decimal: 1)

Variable Type: numeric

IDHH: NCVS ID FOR HOUSEHOLDS

Source code: ICPSR_IDHH

Notes: ICPSR added this variable to facilitate matching of data files. The ID for households is unique within a six month interview period. Given the rotating panel design of NCVS, a value of IDHH may appear in a year of data one, two, or three times. The variables YEARQ and IDHH uniquely identify a household at a given interview within the NCVS.

Based upon 255,901 valid cases out of 255,901 total cases.

Location: 8-32 (width: 25; decimal: 0)

Variable Type: character

V2002: ICPSR HOUSEHOLD IDENTIFICATION NUMBER

Source code: ICPSR_V2002

Notes: The ICPSR has attached, (within a collection quarter), a sequential household identification number to every record. This number uniquely identifies each household record within a collection quarter.

Based upon 255,901 valid cases out of 255,901 total cases.

- Mean: 31992.04
- Minimum: 1.00
- Maximum: 64661.00
- Standard Deviation: 18474.83

Location: 33-37 (width: 5; decimal: 0)

Variable Type: numeric

V2003: YEAR AND QUARTER IDENTIFICATION NUMBER

Source code: Year/Quarter

Notes: This variable identifies the year and the quarter of the interview. The first two digits of this field represents the year, and the last digit represents the quarter.

Value	Label	Unweighted Frequency	%
231	2023, 1st quarter	64102	25.0 %
232	2023, 2nd quarter	64339	25.1 %
233	2023, 3rd quarter	62799	24.5 %
234	2023, 4th quarter	64661	25.3 %
	Total	255,901	100%

Based upon 255,901 valid cases out of 255,901 total cases.

- Minimum: 231.00
- Maximum: 234.00

Location: 38-40 (width: 3; decimal: 0)

Variable Type: numeric

V2004: SAMPLE NUMBER

Source code: Sample

Two-digit code used to identify the sequence and source of selection of sample housing units.

See section - Census Sample Information.

Value	Label	Unweighted Frequency	%
19	-	54016	21.1 %
20	-	73347	28.7 %
21	-	72431	28.3 %
22	-	56107	21.9 %
	Total	255,901	100%

Based upon 255,901 valid cases out of 255,901 total cases.

- Mean: 20.51
- Median: 21.00
- Mode: 20.00
- Minimum: 19.00
- Maximum: 22.00
- Standard Deviation: 1.05

Location: 41-42 (width: 2; decimal: 0)

Variable Type: numeric

V2005: SCRAMBLED CONTROL NUMBER

Source code: Scrambled Control Number

Notes: Beginning with the quarter 1, 2015 NCVS PUF, Census used the 2010 sample design control number scrambling routine to scramble control numbers for 2010 sample design cases.

Beginning with the quarter 1, 2006 (YEARQ = 2006.1) NCVS data files, Census used the 2000 sample design control number scrambling routine to scramble control numbers for 1990 and 2000 sample design cases. Therefore, data users will not be able to match 1990 sample design cases on NCVS data files released for quarter 1, 2006 and beyond (YEARQ >= 2006.1) to 1990 sample design cases on NCVS data files prior to quarter 1, 2006 (YEARQ <= 2006.1).

Scrambled control was expanded to 20 characters in 2005 Q1. Consequently it was defined as a string variable.

Beginning in July 1986 the previously used PSU, segment number, check digit and serial number are scrambled together by the Census Bureau as one variable to preserve confidentiality.

For 1980 sample-first 10 digits -- last four digits are blank (through quarter 4, 1995). For 1990 sample-all 14 digits are used (beginning quarter 3, 1995). Scrambled control number (part) - See V2007 for last two digits of scrambled control number.

Based upon 255,901 valid cases out of 255,901 total cases.

Location: 43-62 (width: 20; decimal: 0)

Variable Type: character

V2006: HOUSEHOLD NUMBER

Source code: Household Number

Notes: This number identifies the sequence of households that occupy a particular address. For example, if a new family moves into a sample unit being interviewed for a second time, the household number will be "2" indicating that this is a different household from that previously interviewed.

Value	Label	Unweighted Frequency	%

Location: 63-63 (width: 1; decimal: 0)

Variable Type: numeric

V2008: PANEL AND ROTATION GROUP

Source code: Panel/Rotation

Notes: The "tens" digit identifies the panel; the "units" digit identifies the rotation group. For example 16 represents panel 1 and rotation group 6. Together, the digits identify clusters which are used in conjunction with the rotation chart. See section - Census Sample Information.

WGTHHCY: ADJUSTED HOUSEHOLD WEIGHT - COLLECTION YEAR

Source code: ICPSR_WGTHHCY

This weight variable is used to determine the average total households during the collection year. This weighting factor will contain all zeros for noninterview households. In addition, since the collection year includes only the current calendar year, household records for interviews conducted in following six months will have a value of zero for this variable. The BJS publications CRIMINAL VICTIMIZATION, YYYY use this weight to calculate household totals.

V2128B: TYPE OF SEGMENT (SAMPLING FRAME) - 1990 SAMPLE (START 1995 Q3)

Source code: TYPE SEG

Code reflects 2010 sample design values. In the 2010 design, we use sampling frames instead of segments. For consistency with previous documentation, we still use the source code TYPE SEG and item name Type of Segment.

Code reflects 2000 sample design values for 1990 and 2000 sample design values for 1990 and 2000 sample design cases beginning quarter 1, 2006.

Code reflects 1990 sample design for 1990 sample cases (beginning quarter 3, 1995).

Identifies the household's type of interview code for the time in sample (indicated in the source code name, one through seven) based on the panel and rotation group from the rotation chart within a household. Replacement households will not carry the TYPEINTV codes from the household it replaced. This variable will be set to blank for any time in sample prior to the household being made a replacement. For example, if a household was replaced in the third numeration, the variable TYPEINTV_TIS1 and TYPEINTV_TIS2 would be missing.

HHBOUNDED: HOUSEHOLD BOUNDED BY PREVIOUS TIME IN SAMPLE (START 2015 Q1)

Source code: HHBOUNDED

Notes: Identifies if the household was a complete interview in their previous time in sample. Households who did not complete an interview their previous time in sample are unbounded. Households who did complete an interview their previous time in sample are bounded. Since a household can be interviewed up to 7 times and this value is based solely on the interview disposition of the prior time in sample, this value may change between 0 and 1 several times.
